Modulus Spread Spectrum Communications modules have built-in 900MHz Spread Spectrum radios for secure data exchange over a license-free wireless network. They also support wired communications with Modbus, DF1, Ethernet IP, SDX, MQTT and SDI-12.

Spread Spectrum Communications modules have built-in analog and digital I/O for tank level and process monitoring, and pump control applications such as wells, lift stations and booster pumping stations. The modules may be ordered with analog inputs supporting either mA, voltage or resistance/temperature measurement. In addition, they have five discrete inputs (one high-speed and four optically isolated), three discrete outputs, and two analog outputs.

Modulus Spread Spectrum Communications modules have two serial ports (bus port plus one general purpose port). The bus port may also be used for general purpose RS-485 communications when not bussed with other Modulus I/O modules.

STANDALONE OPERATION
Modulus Spread Spectrum Communications modules can serve as stand-alone devices with SCADA communications, local and web human machine interfaces (HMIs), historical trending and data logging, alarming, reporting, and programmable logic.

COMMUNICATIONS
Modulus Spread Spectrum Communications modules have a built-in 1W 900MHz Spread Spectrum radio, either Xtend compatible for adding to older systems, or SX for new designs. The also have an Ethernet port and two serial ports to communicate with Modbus devices and Allen Bradley PLCs. They can serve as communicators for concentrators or master controllers, as well as providing web and data access to any other Modulus modules on the high-speed bus. They support Ethernet to Serial bridging, and routing through Ethernet ports in other Modulus modules on the bus.

GRAPHICAL, MOBILE, AND LOCAL HMIs
Configurable graphical and mobile device web interfaces, including the tools and libraries to build custom screens, are built in. The front panel display can also be customized to show live process values and states, and make setting changes.

HISTORICAL TRENDING AND EVENT LOGGING
Modulus Spread Spectrum Communications modules have an internal flash disk, as well as a micro SD memory card slot to record over 100 years of data! Use built-in web tools to retrieve and display historical trend and event data and extract it as spreadsheet files.

REPORTING
Reports with custom graphics and logos can be created in minutes, showing live values, totals, trend/event data, alarm summaries, etc. They can be called up on demand, or sent out automatically.

ALARMING
A Modulus Spread Spectrum Communications module can manage alarm conditions on any of it’s local inputs, as well as over 500 conditions monitored by communications with other devices. Alarms conditions can be displayed locally and annunciated with its discrete output, as well as text message and e-mail alerts over the Internet via its Ethernet port. The module maintains a journal spreadsheet file of when alarms occurred, when they were acknowledged, by whom, and when the alarm conditions cleared.

PROGRAMMABLE LOGIC
Modulus Spread Spectrum Communications modules support programmable logic written in ladder logic, function block and text languages; all with 32-bit integer and floating point math. Programmable logic can supplement the built-in functions of the module.

PID & PUMP CONTROL
Modulus Spread Spectrum Communications modules have a quad PID controller and a triplex pump controller (float or level control) with error detection and alarming. The Spread Spectrum Communications Module is an ideal solution for SCADA operation of wells, lift stations, and booster pump stations.

REDUNDANCY
Modulus Spread Spectrum Communications modules support redundancy for enhanced reliability. If a module goes off-line, a designated backup can take over automatically.
FIELD I/O

Discrete Inputs: 1
- Input Range: Contact closure/open collector driver to ground, or 0 to 30Vdc (ON=<1.5V, OFF > 2.5V)
- Input Current: Approximately 0.5mA (internal current source)
- Filtering: Individually configurable: 5Hz, 10Hz, 20Hz, 50Hz, 100Hz, 1KHz, 2KHz, 5KHz, 10KHz+

Discrete Outputs: 1
- Output Rating: 30Vdc, 2A maximum, current limited to approximately 2.25A.

Analog Inputs: 2
- Input Range:
  - [8X-510X]: 20mA (minimum input for full accuracy is 0.5mA)
  - [8X-520X]: 5V, +/-5V, 10V, +/-10V, 30V
  - [8X-530X]: 50K ohms, temperature using 2.2K, 10K (type II, III and w/11.K shunt) thermistors

INPUTS

COMUNICATIONS

Ethernet: 1
- 10/100mb/s (10/100 Base-T)
- SCADA Protocols: Modbus TCP & UDP (master/slave), Ethernet IP (master/slave PLC5 & SLC5/05 emulation), SDX (AES-128 Encryption), MQTT, Ethernet to Serial bridging
- Internet Protocols: HTTP (server), FTP (server & client), E-mail (SMTP and POP3), ICMP (ping; server & client), DHCP (server & client), DNS, DDNS

Wireless: 1
- 900MHz Frequency Hopping Spread Spectrum Spread Spectrum radio
  - 1/4W (24dBm): Digi Xtend [8x-5x02]
  - 1W (30dBm): Digi Xtend [8x-5x03] or SX [8x-5x04]
  - [8x-5x02 and 8x-5x03]: -110 dBm sensitivity @ 9.6kbps
  - [8x-5x04]: -113 dBm sensitivity @ 9.6kbps
- SCADA Protocols: Modbus RTU (master/slave), DF1 (slave), SDX (AES-128 Encryption)
- Protocols: Modbus RTU (master/slave), DF1 (slave), SDX (AES-128 Encryption), SDI-12 (general purpose port only)

HMIs

- Local: 128x32 graphical, wide temperature range yellow OLED and single pushbutton
- Graphical: Web based, graphic library included. Compatible with most browsers, including Internet Explorer, Firefox, Chrome, Safari, Android
- Mobile: Web based, text only, up to 50 registers. Compatible with most browsers, including Internet Explorer, Firefox, Chrome, Safari, Android

PROGRAMING

Languages:
- Ladder Logic, Function Block, Text—built-in web based graphical and text editor and debugger
-capacity: 64KB logic, 2MB source code, 32-bit integer and floating point math

STORAGE

- Registers: 504 Numeric registers, 504 Boolean registers
- Internal Flash disk: 32MB
- Removable disk: Micro SD Card (up to 256GB, supplied by customer)

CLOCK

- Real Time Clock: Temperature compensated with lithium battery backup power
- Stability: +/- 3ppm from –30°C to 70°C

GENERAL

- Input Power: 10Vdc to 30Vdc
- Power Consumption:
  - Not using Ethernet: 18mA @ 12Vdc / 13mA @ 24Vdc (Ethernet power saver enabled)
  - Using Ethernet: 78mA @ 12Vdc / 43mA @ 24Vdc
  - Radio Transmitting:
    - [81-5x02]: Add 100mA @ 12Vdc 50mA @ 24Vdc in short transmit bursts
    - [81-5x03, 8x-5x04]: Add 320mA @ 12Vdc 160mA @ 24Vdc in short transmit bursts
- Field Wiring Termination:
  - [81-5x0x] screw terminal blocks [B2-5x0x] lever terminal blocks, 3.5mm, 22 to 14GA wires
- Antenna Connector:
  - RP-SMA female (male pin center conductor)
- Temperature: -40°C to 70°C (operating), -40°C to 85°C (storage)
- Humidity: <95% RH (non-condensing)
- Enclosure: Polyamide, light gray (RAL 7035)
- Mounting: 35mm DIN rail with bus connector block

Specifications subject to change without notice. Consult factory to ensure that you are working with current information.

Typical COM1 RS-232 Wiring to Modem/Radio

Antenna System Options

Spread Spectrum radio systems use antennas mounted external to the controller. The type of antenna used depends on both the distance to be covered and the terrain between any two sites that are to be linked together. The selection of antennas, mounting height above grade, cable types, etc. should be determined by use of a radio path study to ensure reliable communications. There are three types of antennas typically used:

- "Salt Shaker" style Omni-directional for moderate distances
- 6dB Omni-directional for best performance at a Master or repeater site
- 6dB Yagi directional for best noise rejection and signal focus at remote sites

"Salt Shaker" Style Omnidirectional for Medium Distance Communications
A "Salt Shaker" style antenna is the lowest cost, and easiest type to deploy in the field. It can be mounted on the top of the equipment panel and works well for moderate communications distance. Since it is omni-directional, there is no aiming or alignment required in the field. The antenna part number is 98-3103, and connects to the communications module with a short internal antenna cable (part number 98-6536).

Antenna Components for Maximum Communications Distances
Using elevated higher gain antennas can significantly improve the performance and reliable operating distance of a radio system. Since elevating the antennas will also increase the installation and maintenance cost of the system, you should always have a radio path study done to select the antenna components and mounting arrangements. Omni-directional antennas do not need to be aimed while Yagi directional antennas will provide better off-axis noise rejection. For either type of antenna system, a lightning arrester is generally recommended since by being elevated, the antennas become a better "target" for a lightning strike. Use a dedicated grounding rod and bonding as shown for the lightning arrester.

Antenna System BOM:

- 98-6536  36" Internal Antenna Cable
- 98-8011  Lightning Arrester
- 98-42xx  Low-loss Antenna Cable (xx= length in feet)
- 98-2106  Spread Spectrum Yagi Directional Antenna
- 98-3106  Spread Spectrum 6dB Omni-directional Antenna
- 98-9002  Weatherproofing Kit (for external antenna connections)
Refer to the installation manual for additional installation details and precautions.

**Discrete Input DI1, Discrete Output DO1 & Analog Inputs — TB1**

The field wiring may be connected directly to the TB1 terminal block, or through a field Wiring Panel as shown in the diagrams below. All discrete inputs/outputs and analog inputs are referenced to the ground terminal (5). This terminal is connected internally to the power supply ground.

The Discrete Input accepts a contact closure or open-collector ("NPN" style) input signal. An external pull-up resistor is not required.

The Discrete Output sources current by switching the module input power to the output terminal.

The 8x-510x models have analog Inputs that accept 20mA current signals. Loop powered (Figure A) and 3-wire (Figure C) can be used. In low power applications, the analog sensors may be powered from the Discrete Output (Figure B), configured to power the sensors on only when needed to take an analog reading (with configurable "warmup" time). Note that for these three configurations, model 82-01xx Field Wiring Panels are used.

The 8x-520x models have analog Inputs that support voltage sensors (+/-5v, +/-10v and 30v) while the 8x-530x models accept resistance sensors including thermistor type temperature sensors. The wiring for these sensors is shown in Figure D below. Note that for these configurations, model 82-00xx Field Wiring Panels are used.
